

Healthy waterways

The five NSW Coastal Catchment Management Authorities are partnering with the NSW Boating Industry Association, Boat Owners Association of NSW, Recreational Fishing Alliance of NSW, NSW Department of Primary Industries (Fisheries) and NSW Maritime to undertake an 'Environmental Education Strategy for Boaters and Fishers' project.

The project involves delivering educational presentations to boating and fishing community groups across coastal NSW. A community group presentation titled '*HEALTHY WATERWAYS = better boating, more fish*' has been developed in conjunction with the project partners. This comprehensive presentation reinforces the values and good practices to assist in maintaining access and a sustainable environment to continue to enjoy boating and fishing.

The presentation addresses what recreational boaters and fishers can do to assist regarding the following aquatic environmental issues:

- Minimising impacts to aquatic habitat
- Stopping the spread of aquatic pests
- How to become involved in protecting and enhancing the aquatic environment

The project partners recommend the presentation to boaters, fishers, clubs or groups. For more information or to arrange a presentation to your club or group, please contact the Project Manager:
